OUR CELL LAB SERVICES

CMDC Labs cell culture lab provides in vitro bioanalytical services for research and drug development. Crucial steps including functional screening and validation testing of surfaces and substances on the activity of cell culture in a controlled environment. This highly desirable and direct evaluation of cell tissue needs specific resources, expertise, and time. From beginning to end, CMDC Labs streamlines this procedure, freeing up our clients to concentrate on other important facets of their research.

Cell culture services are provided by CMDC Labs to accommodate specific client requirements. We offer technical support, specialized facilities, and a range of cell-based assays and test surface functional screening processes that help clients mitigate risks associated with medical device development. We are always prepared to follow specific customer protocols and setups, or we are delighted to offer our wide cell and molecular biology and assay development experience and expertise to assist in establishing and organizing the specifics of the experimental setup.

THE CMDC LABS ADVANTAGE

We provide a stand-alone cell culture service as well as a whole solution that includes downstream cell analysis. Sample preparation, protein profiling, gene expression analysis, and customized biostatistical studies are all services we can offer. By doing so, CMDC Labs can take your product all the way from experimental planning and sample stimulation to sophisticated molecular analysis, and then generate statistical data and figures that are ready for publishing.

Please don't hesitate to get in touch with us to talk about your specific requirements if you have any questions about outsourcing your forthcoming cell culture project.
